

## **Practice Question -Fix Bugs**

### **Project objective:**

**As a developer, fix the bugs in the application using the appropriate algorithms technique.**

### **Background of the problem statement:**

**You have been assigned a few tasks during the sprint planning. Solving the bugs raised**

**by the testing team is one among them. You are given the boilerplate code and are asked**

**to complete it by fixing the bugs.**

**STEP 1: Create a Java project in your IDE.**

**STEP 2: Select new Java class-provide class name follow camelCasing).**

**STEP:3 Inside the search expenses,I have created a variable to get the search element**

**from user.**

**STEP:4 Then in if condition if condition if the arraylist contains the search element then**

**it will print the element you searched for is found.**

**STEP:5 If the condition is not true tyen it will print the element is not found.**

**STEP:6 Then for sorting the values,I have used comparator.sort() method to sort the**

**element.**

**STEP:7 Then by using while condition, I have checked the values using true that is if the**

**values entered if it is correct then it will execute next .**

**STEP:8 Then I have used System.exit(1) method to stop in case 6 or else the loop will not**

**stop because of while condition.Execute the program.**

### **Code:**

```
package arthematicoperations;
```

```
import java.util.ArrayList;
```

```

import java.util.Scanner;

public class FixBugs {

    public static void main(String[] args) {
        /*System.out.println("Hello World!");*/
        System.out.println("\n*****\n");
        System.out.println("\tWelcome to TheDesk \n");
        System.out.println("*****");
        optionsSelection();
    }

    private static void optionsSelection() {
        String[] arr = {"1. I wish to review my expenditure",
            "2. I wish to add my expenditure",
            "3. I wish to delete my expenditure",
            "4. I wish to sort the expenditures",
            "5. I wish to search for a particular expenditure",
            "6. Close the application"
        };
        int[] arr1 = {1,2,3,4,5,6};
        int slen = arr1.length;
        for(int i=0; i<slen;i++){
            System.out.println(arr[i]);
            // display the all the Strings mentioned in the String array
        }
        ArrayList<Integer> arlist = new ArrayList<Integer>();
        ArrayList<Integer> expenses = new ArrayList<Integer>();
        expenses.add(1000);
        expenses.add(2300);
        expenses.add(45000);
        expenses.add(32000);
        expenses.add(110);
        expenses.addAll(arlist);
        System.out.println("\nEnter your choice:\t");
        Scanner sc = new Scanner(System.in);
        int options = sc.nextInt();
    }
}

```

```
